

# Aggregated Results for Questionnaire Answers

Section number      Question number

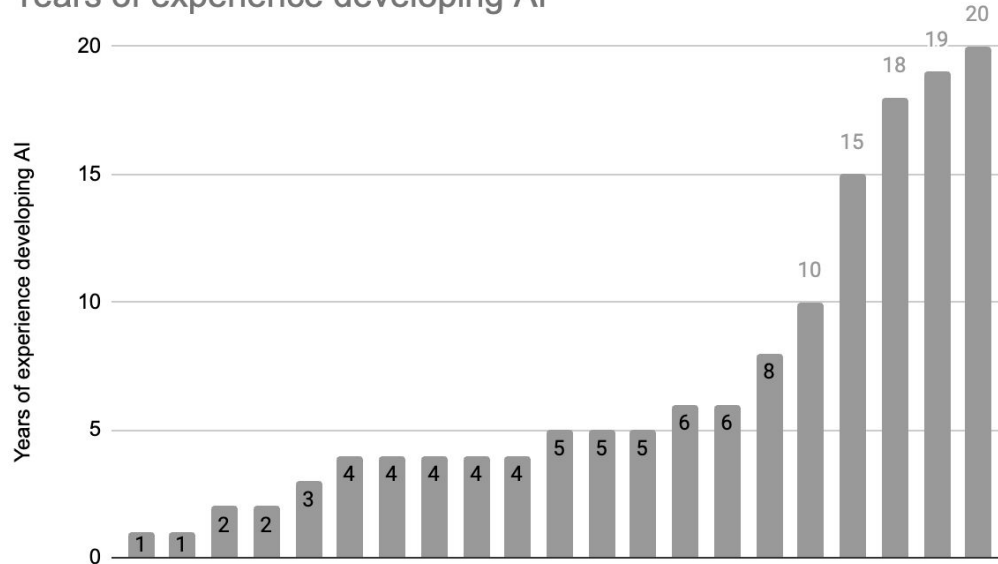

# 1.1 How old are you?

Count of ages of interviewees

## 1.2 How many years of experience do you have in developing AI systems?

Years of experience developing AI

## 1.3 Do any of your AI leverage Deep learning (i.e. neural networks)?

Does your AI use deep learning?

## 1.4 Does your AI - or part of it - qualify as “high-risk” (as proposed by the EU)?

## 2.1 Is the data you use for the development / improvement / use of your AI stored within Europe, or do you store it elsewhere?

Is the data you use for the development / improvement / use of your AI stored within Europe, or do you store it elsewhere?

2.2 Which, if any, cloud provider do you use for AI development? (I grouped the answers based on the different answers I received, but this was an open question)

Which, if any, cloud provider do you use? (count of providers used, multiple options possible per company)

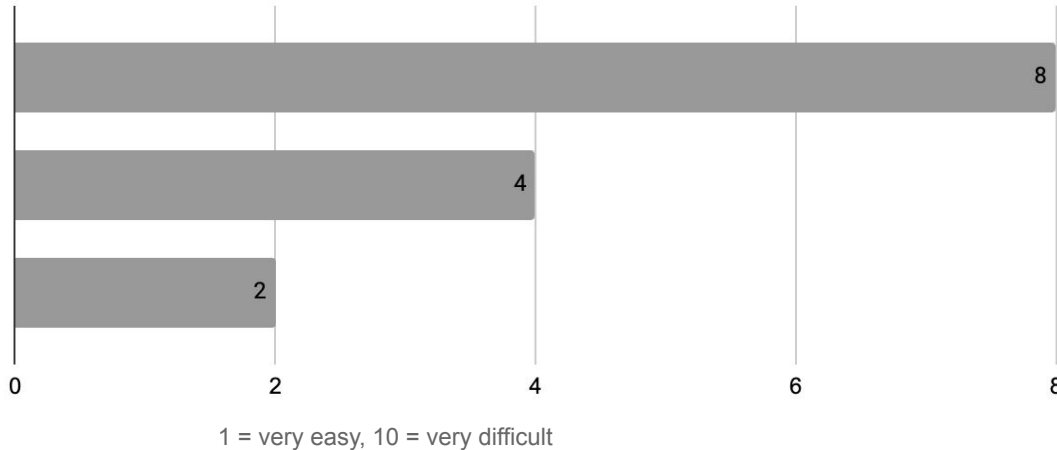

## 2.3 Do you think that some countries outside of Europe have a regulation landscape that would make your business more profitable or favourable (e.g. USA, China)?

## 2.4 If your data is currently stored outside of the EU, how difficult would it be for you to relocate your data to a local data storage (within Europe)?

If your data is currently stored outside of the EU, how difficult would it be for you to relocate your data to a local data storage (within Europe)?

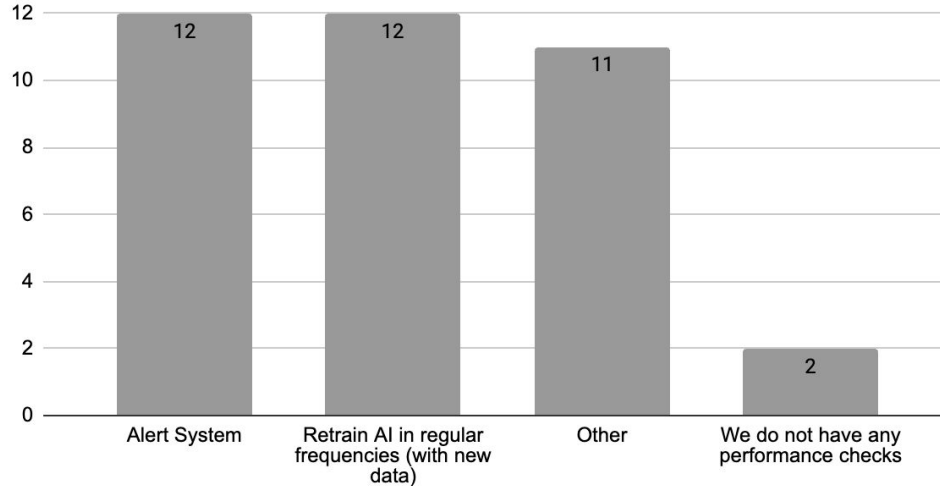

## 3.1 How often do you assess the performance of your AI?

How often do you assess the performance of your AI?

## 3.2 How do you ensure that the AI system will maintain an adequate level of performance over-time?

How do you ensure that the AI system will maintain an adequate level of performance over-time? (multiple answers possible)

### 3.3 Accountability in AI is becoming increasingly important. Do you already have systems in place that oversee accountability?

Accountability in AI is becoming increasingly important. Do you already have systems in place that oversee accountability?

### 3.4 What do you consider more important: The explainability or the accuracy of your AI?

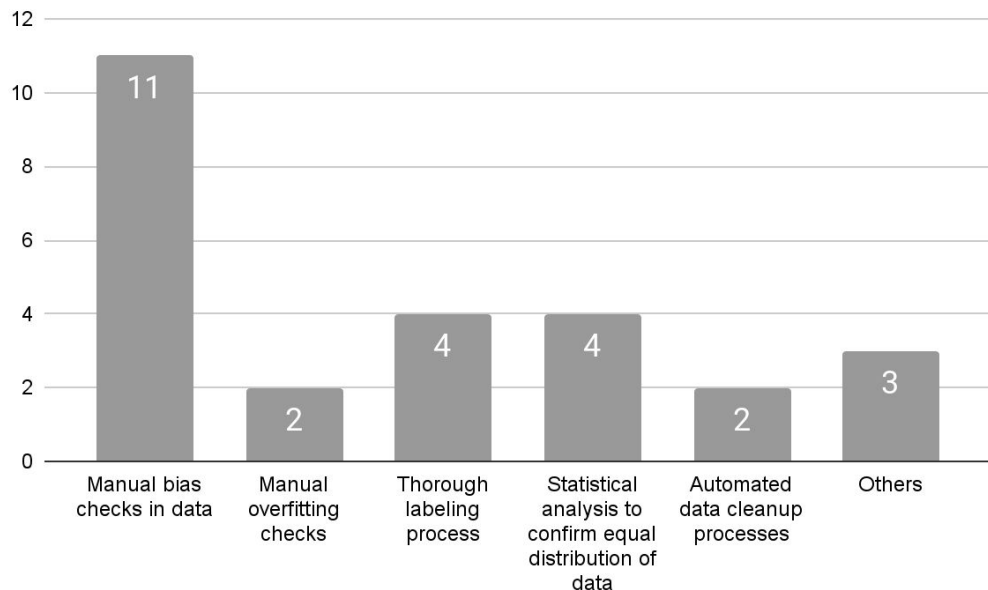

3.5 Bias in AI can occur in many different ways (imbalanced data collection, wrongly labelled samples, biased engineers, etc) and prevents the AI from working correctly. Have you thought of measures on how to mitigate bias?

Bias in AI can occur in many different ways (imbalanced data collection, wrongly labelled samples, biased engineers, etc) and prevents the AI from working correctly. Have you thought of measures on how to mitigate bias?

3.6 If yes to 3.5, what have you implemented? (This was an open question: the bins reflect the authors' interpretation of the answers)

## 4.1 Do you consider security-by-design principles when developing your AI?

## 4.2 Are you aware that the intellectual property of your AI might be at risk? (somebody stealing your AI)

Are you aware that the intellectual property of your AI might be at risk? (somebody stealing your AI)

## 4.3 How well protected is the intellectual property of your AI?

How well protected is the intellectual property of your AI?

## 5.1 How often do you encounter legal issues with your AI?

How often do you encounter legal issues with your AI?

## 5.2 There are calls for more policies and regulations to clarify what is allowed and what isn't in the field of AI. Would you prefer more 'fine-grained' regulations or more general ones?

There are calls for more policies and regulations to clarify what is allowed and what isn't in the field of AI. Would you prefer more 'fine-grained' regulations or more general ones?

## 5.3 Do you regularly consult with an expert/lawyer about the current regulations affecting the use of AI?

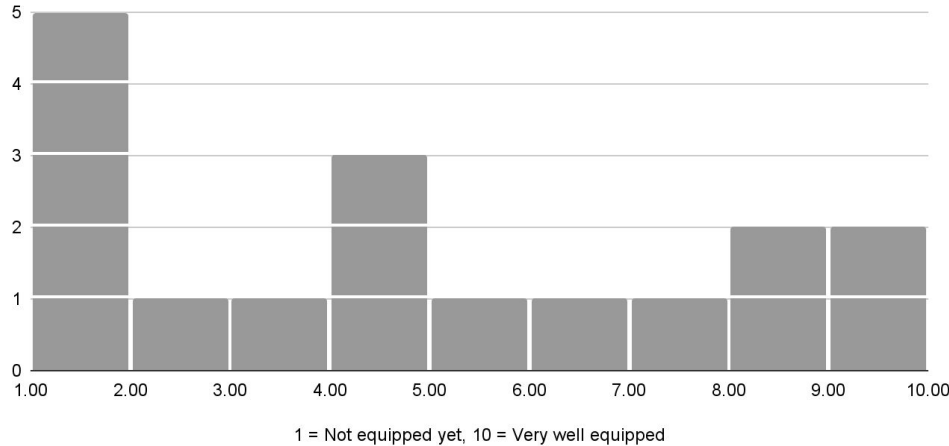

## 5.4 Some existing regulations state that businesses must remove potentially a large amount of data due to privacy protection reasons. Additionally, users could renounce businesses the right to use their data for certain purposes. Do you have fine-grained access to your training data to remove one specific sample?

Some existing regulations state that businesses must remove potentially a large amount of data due to privacy protection reasons. Additionally, users could renounce businesses the right to use their data for certain purposes. Do you have fine-grained access to your

## 5.5 How well equipped is your business to react to many (e.g. all of a sudden 50 a day) unforeseen requests to remove samples?

How well equipped is your business to react to many (e.g. all of a sudden 50 a day) unforeseen requests to remove samples?

## 5.6 Do you think that, when asked about disclosing documentation by legal authorities, you must disclose more information than what you currently have available?

Do you think that, when asked about disclosing documentation by legal authorities, you must disclose more information than what you currently have available?

- We will need to disclose more information than we currently have available
- We have enough documentation available
- We have not thought about this yet

## 5.7 Future regulation might require AI businesses to disclose to users that they are currently interacting with an AI. Do you already disclose that information to the end-users of your product?

Future regulation might require AI businesses to disclose to users that they are currently interacting with an AI. Do you already disclose that information to the

No, but plan to do so

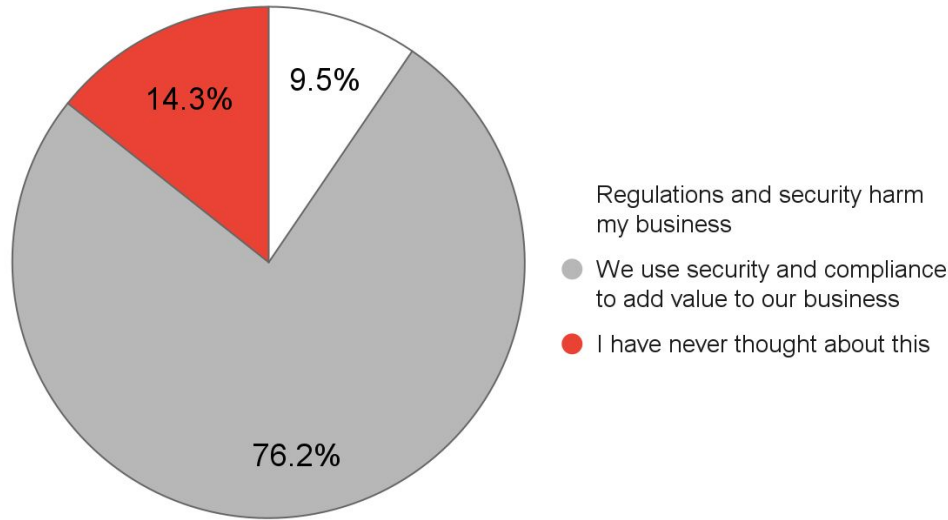

6.3%

No

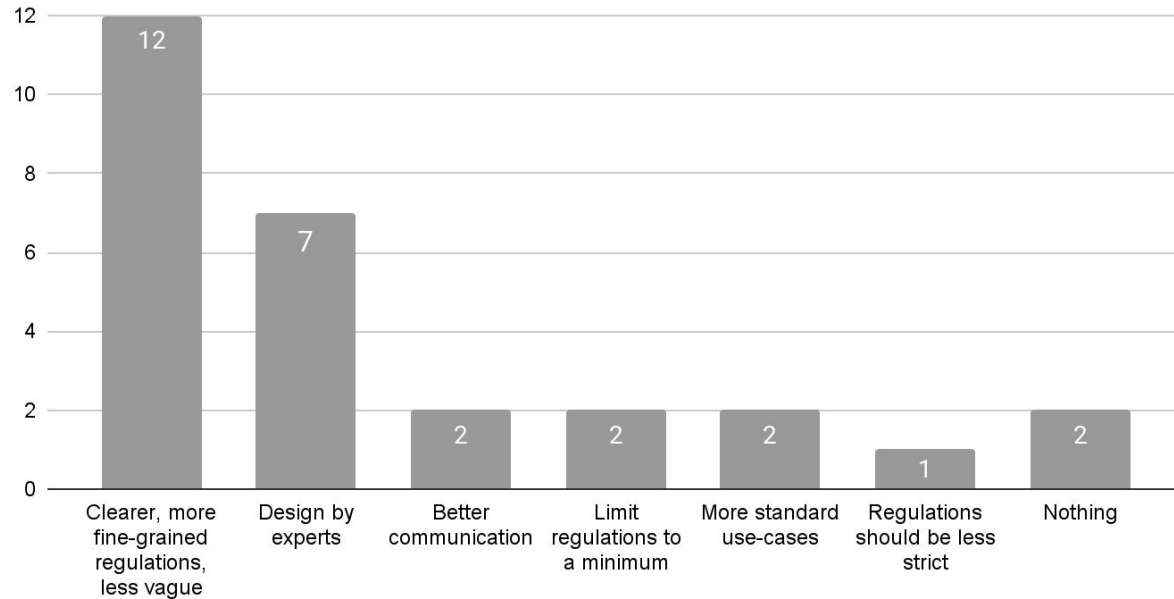

12.5%

## 5.8 Do you think that regulations compliance and cyber security measures only harm your AI business or have you thought about using it as an opportunity?

5.9 What do you think should be done to improve the current regulations landscape? (This was an open question: the bins are reflect the authors' interpretation of the answers)

6.1 Research found that most people consuming AI products are incapable of understanding what it is and what it does. Do you think informing your clients about the general architecture of your AI improves trustworthiness?

Research found that most people consuming AI products are incapable of understanding what it is and what it does. Do you think informing your clients about the general architecture of your AI improves trustworthiness?

## 6.2 If yes, how feasible would it be in your case to explain what your AI does (its architecture and how it works)?

If yes, how feasible would it be in your case to explain what your AI does (its architecture and how it works)?

1 = Not feasible, too complicated, 10 = Feasible, can explain

## 6.3 From 1 to 10, how much would your company benefit if the general population had a better understanding of AI?

From 1 to 10, how much would your company benefit if the general population had a better understanding of AI?

1 = Not benefit at all, 10 = Benefit a lot

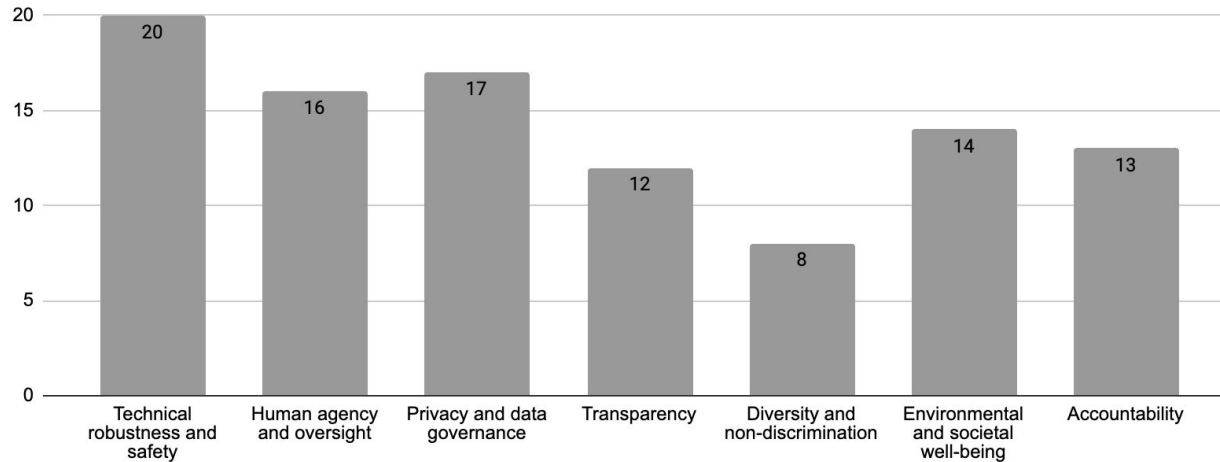

## 6.4 The Assessment List for Trustworthy Artificial Intelligence (ALTAI) is a checklist created in 2020 by a high-level expert group on artificial intelligence appointed by the European Commission. Have you heard about it?

The Assessment List for Trustworthy Artificial Intelligence (ALTAI) is a checklist created in 2020 by a high-level expert group on artificial intelligence appointed by the European Commission. Have you heard about it?

## 6.5 The expert group has created 7 areas of AI where businesses can ensure the trustworthiness of their AI. Which of the following KPI's are you already implementing?

The expert group has created 7 areas of AI where businesses can ensure the trustworthiness of their AI. Which of the following KPI's are you already implementing?

## 6.6 If you haven't already applied measures, would this checklist help you in making your AI more trustworthy in the future?

If you haven't already applied measures, would this checklist help you in making your AI more trustworthy in the future?
